

For all website concept pages please ensure that you follow these guidelines:

1. Please ensure that your design fits within the width of a 960px box. If you are familiar with the 960 Grid System for web design, you may prefer to use one of the templates for the 12 or 16 grid system which can be found at <http://960.gs/>

Note that there is no restriction on the height of the page, so this may adjusted accordingly.

2. The website design should incorporate only images and text created or licensed to the designer. The use of Flash or interactive elements, including forms, is not supported within the template package, so should not be considered in your design.

3. Websites should include navigation for only the number of pages in the selected package. For example, if a 5 page package is commissioned, then there should be appropriate navigation elements for the 5 pages.

4. All designs should be provided as a multi-layered EPS/AI file, ready for conversion into a working website. Please ensure the file provided is compatible with Adobe Photoshop CS3. All images and fonts used in the design must also be provided, along with evidence that licence has been granted to use these resources on the live website design.
